INDOLOGY

INTRODUCTION

Hello everyone, my name is Francesca Madrid (yes, like the Spanish city), I am from El Salvador but now I live in Guatemala; I am a teenage high school student in computer orientation (software and computer development) my level of English is intermediate and this is my idea for my website is closely related to the solution of a problem that is seen as a reality in the region in the Que Vivo, Creative Lemonade (CL) is an initiative that was born in 2019 in order to support students of basic-level public schools in rural areas, and the artisan mothers and fathers of these students, from CL it emerges Innology, the website that will specialize in educational innovation.

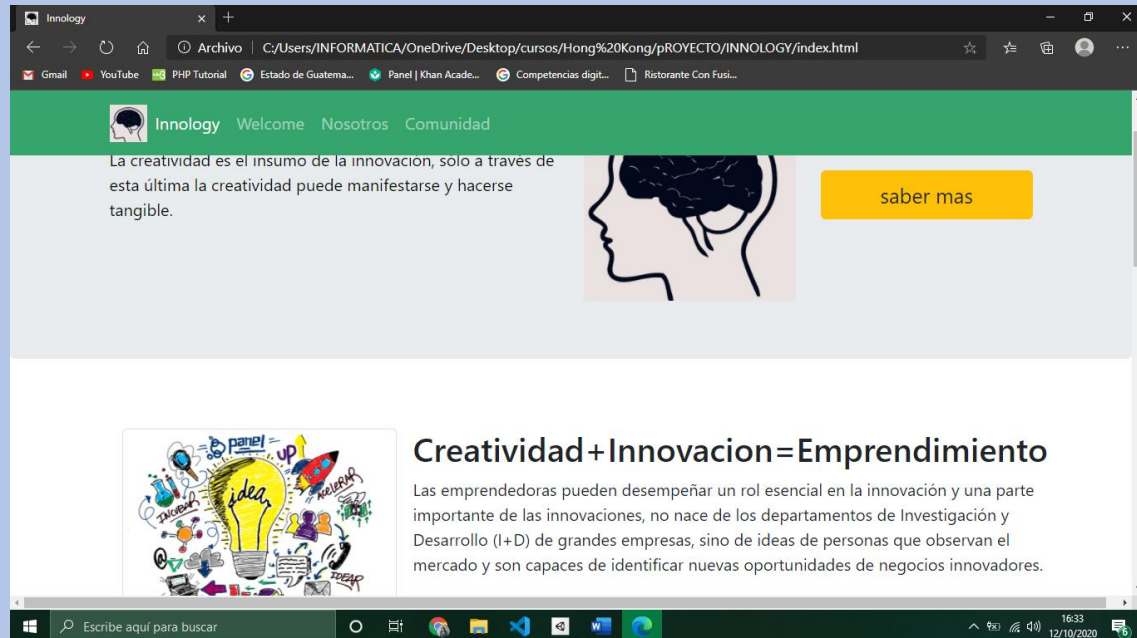

INNOLGY

The Innology site consists of 13 web pages, all are in Spanish because I live in Central America, in my region Spanish predominates, I know it does not have the most professional finish but I do my best and I hope you like it

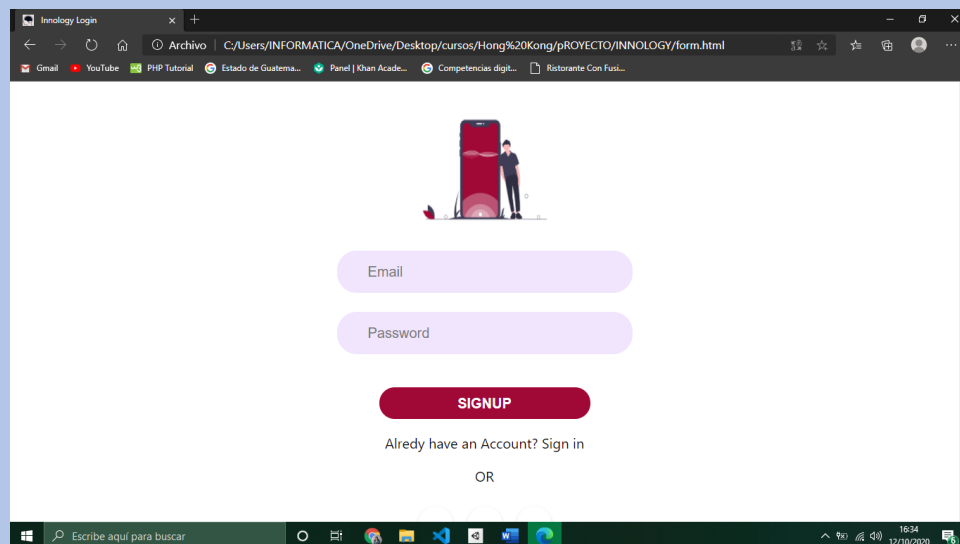

(all is responsive)

Index

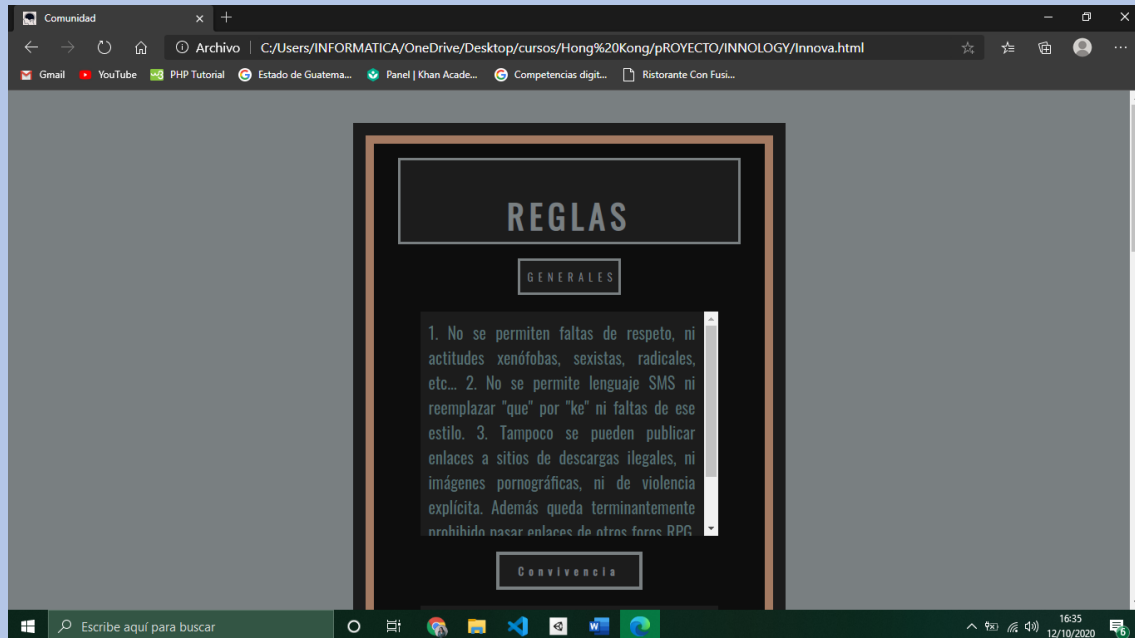

On the main page there are some definitions in my mother tongue, that is, Spanish, accompanied by visual references

Rules

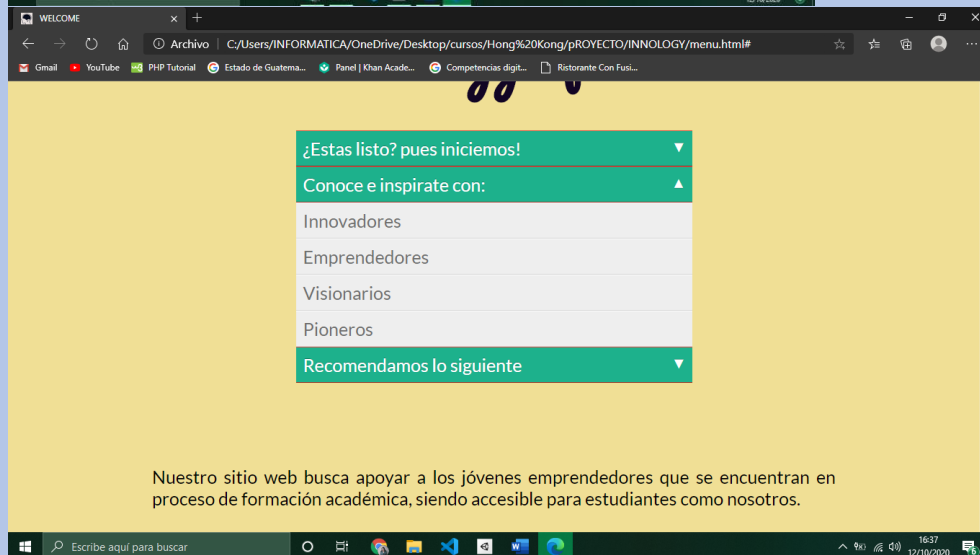

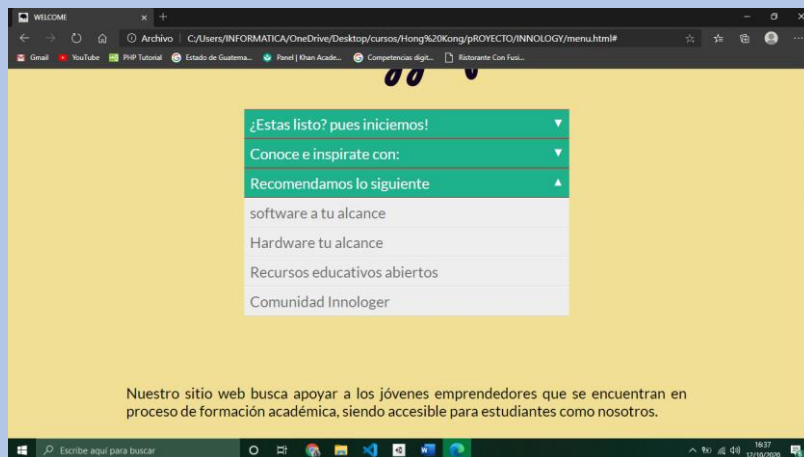

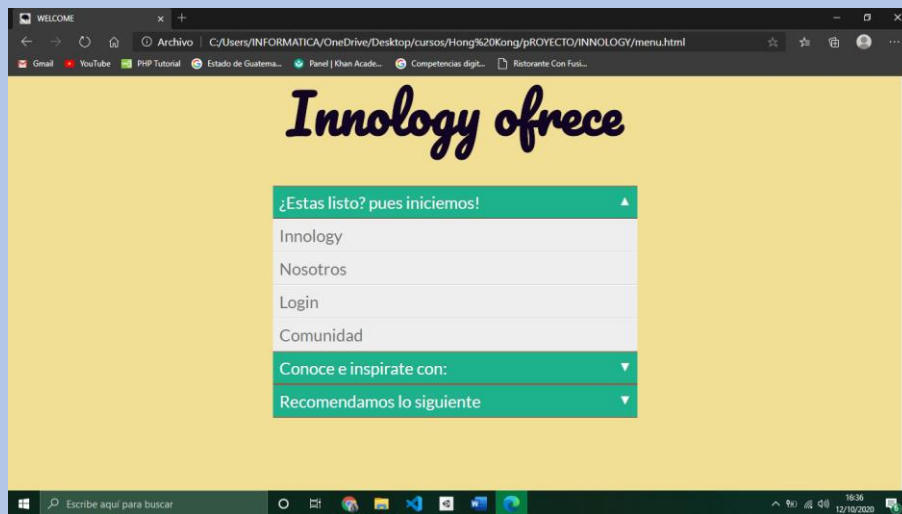

the rules are because both CL and Innology are thought of as a community.

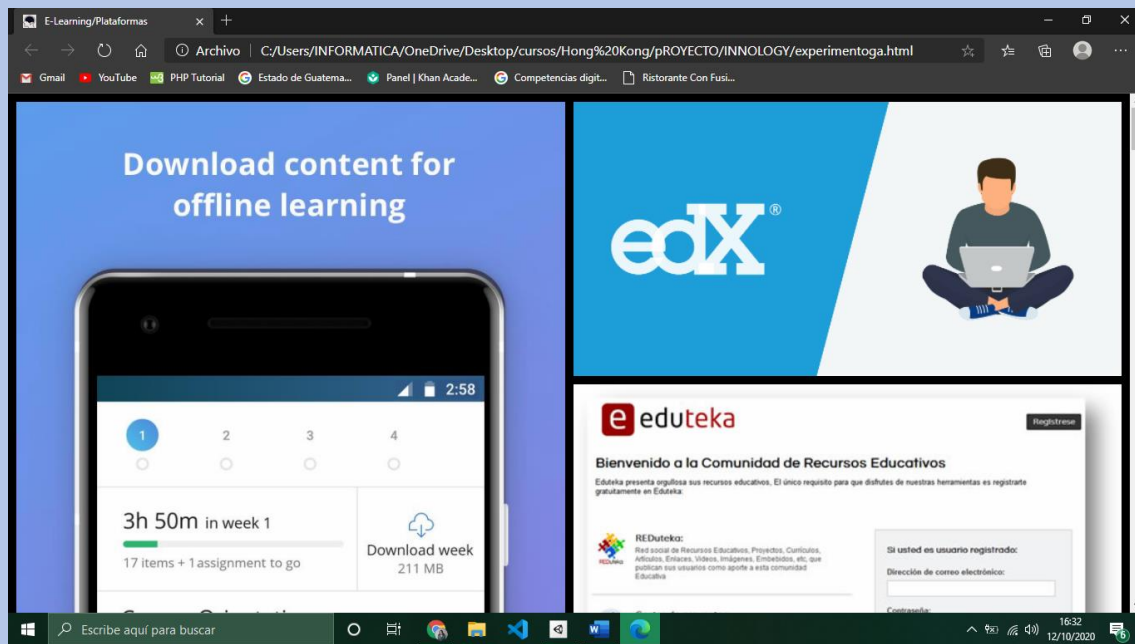

It is called virtual community or digital community¹ to that section of data processed with each other, whose links, interactions, relationships, communications, and techniques take place, not in a virtual space but in a physical space such as the CPU. Virtual communities are formed from similar processes between a group of people, whose job is to organize the great Internet network into sections. They are organized and carried out from online services. It can be of any subject or of any technological study, there are no denials. Communities know that they are networks, they evolve in this way, expanding their members, diversifying among themselves, they are born in cyberspace.

They are groups of individuals and institutions organized cybernetically around a range of specific interests, whose interactions, links, relationships and communications occur through the Network.

Menu

E-learning

The e-learning platforms are offered both in ASP (Application Service Provider) mode, hosted on e-ABC Learning's own servers, or they can be installed on-site on client servers. In any case, hosting is only a small percentage of the service provided by e-ABC Learning, since the maintenance of a computer system and a successful implementation of the LMS requires more extensive assistance than just the application. Below are the different aspects that comprise our LMS service and its percentage importance in its cost.

The World Development Report 2018 warns that there is a “learning crisis” in education globally. Specifically, it points out that millions of young students in low- and middle-income countries could miss out on opportunities and earn lower salaries in the future because primary and secondary school do not provide them with the tools to thrive. According to the

report, even after attending school for several years, millions of children cannot read, write or do basic math.

Latin America, on average, has experienced a great increase in terms of education coverage in the first decade of the 21st century, although the advances were very different between countries, the expert explained. "In Central America, Costa Rica stood out in terms of the increase in the gross enrollment rate. In El Salvador and Honduras these increases were smaller and in Guatemala almost no changes were registered. For its part, in Panama there was a reduction in the gross enrollment rate", he specified. "In terms of equity, the region saw, on average, an increase in the percentage of secondary school

students who belong to the poorest 50% of the population. This is particularly important if we take into account that the Central American countries, with the exception of Panama, continue to be one of the most unequal in Latin America," he added. In terms of quality, the report finds that there are many differences between countries in terms of the probability that students will graduate from higher education. In Central America, graduation rates differ considerably between the different countries, with Nicaragua the country with the highest rates and Honduras the one with the lowest.
